

2008 Challenge - Climate Connections

FLL teams investigate the causes, contributions, consequences and interconnections of climate change and why the experts are telling us to "think globally - act locally." Teams:

- **EXAMINE** complicated, interdependent problems from multiple angles in a team building environment
- **BUILD & PROGRAM** a robot to turn ideas into results through a fun, hands-on dynamic learning experience
- **RESEARCH & PRESENT** their own creative solutions to meet our planet's growing energy needs in a way that is good for the environment
